# 'It's a wake-up call,' scientists warn

Meteorite that hit near Russian city, breaking windows, injuring hundreds, shows need for better detection of threats from space

IVAN SEMENKOV  
SCIENCE REPORTER  
CAMBRIDGE, MA

When the sky is falling, you can count on Richard Binzel to get excited.

Standing in his office at the Massachusetts Institute of Technology, Dr. Binzel brandishes a blackened lump of iron that is not of this Earth: "You wouldn't want to have this land on your head," he says.

Dr. Binzel's specialty is asteroids – the flying bits of rock and metal that whiz by our planet with disconcerting regularity and sometimes score a direct hit. The grapefruit-sized fragment in his hand is a piece of cosmic shrapnel from a massive iron meteorite that blazed over the Sikhote-Alin region of eastern Siberia in 1947.

Now, he and his fellow planetary scientists are abuzz over another Russian fireball, which exploded on Friday morning over Chelyabinsk, a city of more than one million people east of the Ural mountains. The blast was created by a 15-metre space rock hitting the atmosphere at 18 kilometres per second broke windows and caused light structural damage. Estimates based on multiple sources of evidence, including infrasound – pressure waves at too low a frequency for humans to perceive – suggest the energy delivered was greater than would come from the detonation

"It's a wake-up call," says Christopher Herd, an associate professor in the department of Earth and Atmospheric Sciences at the University of Alberta.

Dr. Herd is a member of the international committee that will name the Chelyabinsk fireball, a designation that will go with any pieces that turn up. Fragments would hold a special place in history, he notes, because they'd be chips off the largest meteorite ever observed on its flight through the atmosphere. Time is of the essence, he adds, because rare isotopes formed in the vacuum of space could be lost or contaminated by exposure to the elements.

If pieces of the fireball are found, scientists will be curious to see how much diversity they exhibit. Most meteorites are too

Prof. Brown says, in different circumstances, the object in Russia might have been spotted ahead of time by existing surveys, just as the Sudanese meteorite was. Initial indications are it approached Earth from the daylight side, which would have made it impossible to spot with a telescope on the ground. Prof. Brown adds it would require a significant increase in resources to detect most objects of equivalent size. Some efforts are under way to beef up surveillance from space, including a small Canadian satellite, NEOSat, due to launch on Feb. 25.

But Russell "Rusty" Schweickart, a former Apollo astronaut and advocate for asteroid surveillance, laments the lack of an internationally co-ordinated effort to spot larger threats. He is co-founder of B612, a non-profit group that wants to launch an infrared telescope called Sentinel that will travel on solar orbit to survey the larger asteroids of the inner solar system. It would track asteroids 30 metres wide or larger. "We're looking at things that are going to involve potentially the deaths of many people, large destruction, not things that just break windows," he says.

"Once you find them and track them, then you can forecast decades ahead and thereby prevent their impact by deflecting them. That's why you need to begin these surveys as soon as possible."

## A TIMELINE

**The entry:** A 7,000-tonne meteor entered the atmosphere above Chelyabinsk, Russia, at 9:20 a.m. local time at a speed of at least 54,000 kilometres an hour, disintegrating at a height of 30 to 50 kilometres. Researchers at NASA say it hailed from the asteroid belt between Mars and Jupiter.

**The strike:** The meteor unleashed a force 20 times more powerful than the Hiroshima bomb, although the space rock exploded at a much higher altitude. The fireball it produced was dramatic, causing a sizable sonic boom.

**The fallout:** An estimated 1,000 people including 200 children were injured. Many were hurt rushing to windows to glimpse the fireball, only to have the windows shatter seconds later. Shock waves from the debris are believed to have knocked in part of the roof and walls of a local zinc plant and damaged 3,000 other buildings.

Associated Press

## SPACE TRAFFIC

The meteor that fell over Russia is not linked to 2012 DA14, the 130,000-tonne asteroid that yesterday swung closer to the Earth than any other known asteroid. Their trajectories were almost opposite.

BLESS AMERICA

BY MARTIN WITT

**WE** ARE living in the End Times, and one man—more than any other—had the clairvoyant power to foresee how this perilous era will unfold in all its horrifying detail.

That man was Cheiro, extolled as the most insightful prophet since Nostradamus, a psychic palm reader who commanded the respect of

“I believe an event will occur – not so much catastrophic but perhaps one filled with wonderment and awe, because, God knows, the mess we’re in now that is slowly devolving into WWII is catastrophic enough, thank you very much. The King of Kings, the Star-traveler who created us, is coming to stop the carnage “...lest all flesh perish!” Then – and only then – will there be peace on Earth... [see Revelation; Christian Bible].

Then surely all religions will be One!"

From: Anthony Carr's *STARGAZER* 2011, p8

**"The ultimate end of this planet? Only when the great Goby once more becomes an ocean.**

**\* A Cataclysmic, Universal Sympathetic Vibration of the "C" musical note shall ultimately and utterly shatter the planet Earth!!! (Not now, but someday soon.)**

a psychic whose astonishingly accurate predictions have been recorded in publications worldwide, including *Sun*.

"Many other psychics also foreseen the Times," Carr writes. "The person who saw the events with uncanny accuracy, before any others, was Cheiro, a

Author p

PSYCHIC Anthony of the biography of predicted the horrifying the space shuttle Colum

In July, 2002 – more than six months before the tragedy – Carr had a riveting vision which he described as follows: "Giant comet-like object streaks through the heavens; bright enough to be seen during daylight hours."

When Carr saw the first home videos of the Columbia disaster

"Watch for a sign in the heavens that will shock the world! Like a bolt of lightning - perhaps in the form of a UFO - it will put the fear of God in us!... I feel a great revelation for the world is at hand, as if the entire population is coming to its collective senses as we realize we must do something before it's too late. We'll help each other and band together for protection and for the sake of the survival of the human race. Reversal of celestial and terrestrial events and properties will reverse polarities and moralities and return us to old-fashioned values."
